SUMMARY

Senior product engineer with 10 years building web products across proptech, automotive marketplaces, B2B SaaS and developer tools. Frontend is my deepest skill, and 3 to 4 years of backend work (Node.js, PHP, Kotlin, PostgreSQL) means I can take a feature from a rough problem to a shipped, measured workflow.

I was an early engineer at a climate tech startup, shaping both the tech and the product flow of a platform that analysed around 3 million m² of building space. Before that I was the sole engineer on a pre-seed product working directly with the founder, and helped build a low-code platform from scratch where I cut chatbot build time in half.

I push back when a plan costs more than the problem it solves, ship the smallest version that proves the value, and let real usage decide what comes next. I use AI agents daily, inside a test-first workflow, to ship faster without lowering the bar.

EXPERIENCE

Purpose Green Berlin, Germany — Jul 2024 – Jun 2026

Senior Frontend Developer

Climate tech company for energy-efficiency retrofits and ESG asset management in real estate. The company filed for insolvency in August 2026.

- Led the frontend team that built Green+ from scratch, the customer-facing portal property investors used to manage sustainable portfolios, covering energy analysis of around 3 million m² of building space. Owned onboarding, Stripe subscriptions and the frontend-backend contract, shaping the data model and APIs with backend, product and design.
- With no PM in place, scoped a minimal premium data room (S3-backed upload, rename, delete) from rough wireframes. Customers were storing ESG documents, photos and videos within days, and that usage justified folders and file moves in the next sprint.
- Challenged a planned 21-day, ~100-file rebuild of the Measures Configurator, a refurbishment simulation and ROI tool, that had no usage data behind it. Found the real goal (cutting the path from 4 clicks to 2), shipped it in about a week by reusing existing components, and added engagement tracking so the rest would be decided on data. Property owners got the shorter path two weeks sooner.
- Set the engineering foundation: a pnpm, Vite and Turborepo monorepo, a design system on React Aria, Tailwind and Storybook, and domain-driven design with strict TypeScript, which made onboarding much faster.
- Played a key role in shaping the team's Claude Code workflow, building shared skills for frontend refactoring and translation. Owned the translation flow end to end, automating it through POEditor, DeepL and OpenAI so translations shipped with no manual work.
- Mentored engineers through reasoning-first code reviews, ad hoc pairing and speaking at internal tech talks, and introduced feature flags so leadership could test beta features as customers would see them. Engineers went from needing hands-on review on most PRs to shipping independently.

React · TypeScript · Vite · Turborepo · Zustand · TanStack Query · Tailwind CSS · React Aria · Storybook · Auth0 · Playwright · Vitest · Stripe · Sentry · Pendo · PHP · PostgreSQL · AWS S3 · Claude Code

HeyCar Berlin, Germany — Jun 2022 – May 2024

Frontend Developer

Used-car marketplace operating in 5 markets: Germany, the UK, Spain, France and the Netherlands.

- Owned the Dutch market end to end in the customer-facing Next.js app: maintenance, new features, and full epics, including a Core Web Vitals improvement so buyers got faster, more stable listing and search pages.
- Led a design system upgrade used across all 5 markets, introducing a new font and redesigning major components, owning versioning, Storybook documentation and adoption by product teams. Every market got a consistent, refreshed UI from one shared source.
- Cut the tech debt backlog by 50% over three monthly refinement cycles through systematic refactoring and test-driven development, freeing the team to spend more time on features.
- Worked across the stack: React and Vue.js frontends, Node.js and Kotlin services on PostgreSQL, and Kentico CMS integration for multi-market content. Reshaped API data structures to fit what the product needed on screen.
- Onboarded engineers, reviewed pull requests and maintained engineering documentation.

Next.js · React · Vue.js · TypeScript · Node.js · Kotlin · PostgreSQL · GraphQL · Tailwind CSS · shadcn/ui · Storybook · Webpack · CircleCI · AWS

OrgFlow Heidelberg, Germany — Dec 2020 – May 2022

Software Developer (Contract)

- Built a Salesforce CRM versioning product from concept to delivery as the sole engineer for long stretches, on €135k of pre-seed funding over 16 months.
- Worked directly with the founder on priorities and trade-offs, shaping scope to fit a small budget and a small team.
- Built the core VSCode extension (TypeScript, Angular) that let Salesforce admins manage and version org metadata from their editor, plus Node.js and Express APIs, MySQL, Azure infrastructure, Flask services and a React Native companion app.

TypeScript · Angular · Node.js · Express.js · React Native · MySQL · Azure · Flask

Aliru GmbH Mannheim, Germany — Oct 2019 – Nov 2020

UI Engineer

- Built a low-code chatbot administration platform from scratch as an early engineer, owning requirements, architecture and delivery.
- Designed a visual flow-graph editor with multiple node types and a logic calculator (react-diagrams), removing three steps from bot building and cutting build time by about 50% for the people creating chatbots.

React · Redux · TypeScript · Material UI · React Native · Node.js · Express.js · MongoDB · GraphQL

SM NetServ Technologies Bangalore, India — Jan 2019 – Sep 2019

Software Engineer

- Built a web platform for Mathematica Policy Research that replaced raw API calls, so researchers could create and manage projects through a usable interface instead of developer tooling.
- Led two interns on modern web practices and wrote and reviewed technical documentation for the client.

React · TypeScript · Node.js · Express · MongoDB

AppAchhi Tech Bangalore, India — Aug 2016 – Jan 2019

Web Developer

- Built production web apps including data-driven dashboards, management interfaces, sign-up flows, landing pages and an interactive product demo, working with designers and product stakeholders across the delivery cycle.

JavaScript · jQuery · Bootstrap · PHP · Phalcon · Handlebars

TECHNICAL SKILLS

Product engineering	Discovery and scoping, MVP definition, API contract design, data modelling, product analytics (Pendo), feature flags, stakeholder demos
Frontend	TypeScript, React, Next.js, Vue.js, Angular, Zustand, TanStack Query, Zod, Vite, Turborepo, Tailwind CSS, shadcn/ui, React Aria, Storybook
Backend and APIs	Node.js, Express.js, GraphQL, REST, PHP, Kotlin, Python, Flask, PostgreSQL, MySQL, MongoDB
AI and automation	Claude Code, AI agent workflows, OpenAI API, automated translation pipelines
Cloud and delivery	AWS, Azure, Vercel, Docker, GitHub Actions, CircleCI, trunk-based development
Quality and observability	Playwright, Vitest, TDD, E2E testing, Sentry
Other	Auth0, OpenID Connect, Google OAuth, Stripe, Kentico CMS, Figma

EDUCATION

MS, Big Data and Business Applications 2019 – 2021
SRH Hochschule Heidelberg

B.Tech, Computer Science 2012 – 2016
ITER Bhubaneswar
